### Description

---

Cisco 4451-X ISR is the new flagship router of the Cisco ISR family. It continues the feature-rich and high-reliability heritage of the ISR family with exceptional performance, services, and simplicity. It includes:

- A multi-core CPU architecture running Cisco IOS-XE Software that dynamically adapts to the changing needs of branch environments
- Control data and services plane to deliver application-aware services while maintaining high reliability during peak load
- Services-aware data plane that simplifies provisioning and configuration, and scales to Gigabit forwarding performance
- Wide range of wired connectivity options, including T1/E1, T3/E3, and Gigabit Ethernet
- Built-in services virtualization framework that enables faster feature integration and investment protection

The 4451-X ISR offers:

- Native service, integration encryption acceleration and firewall
- Voice and video-capable architecture
- Call processing
- Application visibility and control
- WAN optimization and embedded services

## Routers : Cisco 4400 Series

---

Pay-as-you-grow performance and services allow customers to standardize on a single platform and add capabilities without disruptions or truck rolls. Get exceptional total cost of ownership (TCO) savings and network agility through integration of market-leading security, unified communications, and application services.
